Long Island Sound
2024 Public Perceptions Research Study
Regionwide Survey & Focus Groups

Segmented Survey Results

This document provides results segmented for many population subgroups. There are four pages or "Banners" of data for each question. Moving across the page are the responses for subgroups of the population (for example, by geographic or demographic subgroup), which enable the reader to look for differences among various segments. An uppercase or lowercase letter beneath a data cell indicates a statistically significant difference with a neighboring cell; the letter designates the column header for the cell that is being compared. Uppercase letters signify 95% confidence that the difference is statistically significant. Lowercase letters signify 90% confidence. If percentages in neighboring cells appear to be different but no uppercase or lowercase letters appear, the difference is not statistically significant.
